IBM Gold Business Partner

REMEDI Framework for IBM Sterling B2B Integrator

Deploy IBM Sterling B2B Integrator up to 4 times faster

What is REMEDI's Framework?

- REMEDI's Framework contains Rapid Deployment Methodology
- REMEDI's Framework is a service based framework for IBM Sterling B2B Integrator and the Sterling B2B Collaboration Network
- REMEDI's Framework provides clients a flexible means of enhancing B2B Integrator's integration capabilities and offers extended visibility into documents securely transferred via the Sterling B2B Collaboration Network

REMEDI's Framework provides:

- Quicker ROI on the purchase of the software
- Reduced implementation time
- Faster trading partner onboarding and management
- Reduced need for custom business processes
- Streamlined management tasks
- Allows configuration of multiple routing maps
- End to end document visibility and reporting

What does REMEDI's Framework have that others do not?

- Business Intelligence Portal
- Role Based Visibility Portal offering 7+ years of document visibility
- Support for all major protocols (FTP/S, HTTP/S, SFTP, AS2, SMTP, POP3/IMAP, JDBC, WSMQ, JCL, MAILBOX, FS)
- Tight integration with major ERP Systems (SAP, EBS, MS Dynamics, etc.)
- Tight integration with JDBC compliant databases (Oracle, SQL, MySQL, DB2, etc.)
- A single solution for EDI, NON-EDI (XML, CSV, etc..), EAI, and MFT processing requirements
- Support for complex message orchestration (multi-route, carbon copy, etc.)
- Trading Partner onboarding utilities, allows quick upload from spreadsheet
- Centralized Error Monitoring (via web portal) and partner level notification lists

In addition to the time savings, other advantages include:

- Design built on 10+ years of Sterling Integrator implementation experience
- Robust, stable, time tested methodologies, supporting complex processing requirements, in mission critical, high volume environments
- Feature Rich Architecture; supports the ability to extend framework without compromising visibility and operational controls
- Support for EDI, EAI, and MFT operations, shared visibility

Ask about our fully Customized Visibility Portals
- Visibility portals, with access to source and destination data, allow data to be searched at the transport, partner, EDI, and data levels
- Executive Summary Reports allow you to view transaction dollar amounts for divisions as well as transaction numbers and kilobytes

REMEDI's Framework Methodology is ***delivered as a service, not an additional piece of software you are required to purchase or pay maintenance on.***

We understand the challenges of implementing a new solution; the time and planning of an implementation can be taxing on an IT staff. Our Framework can alleviate these issues and be deployed in existing B2Bi environments to gain the advantages cited above.
