Success Story

IBM B2B Integrator Installation

Since 1955, Shurtape has designed and developed tape serving a variety of markets, from painting and packaging to HVAC and transportation. Annual revenues are approximately \$112M with 1,100 employees.

Situation

The company was involved in performing a Gentran NT migration to the IBM B2B Integrator (Sterling B2B Integrator) 5.0 platform, and required expertise to install and configure the product in a clustered environment.

Solution/Deliverables

The deliverable was the installation, configuration, and documentation of a B2B Integrator 5.0 clustered (2-node) environment, tested for load balancing and failover.

- The application server(s) were tuned to optimize performance.
- Interface adapters were configured and tested.
- A system maintenance and monitoring plan was established to ensure ongoing operational stability.
- An environment review and knowledge transfer session was conducted to educate client resources on system administration.

Outcome

The delivery of a stable, fully documented environment, allowed client resources to focus on the implementation and migration phase of the project.

Technical Environment: Windows, Gentran NT, B2B Integrator 5.0, SQL Server 2005, SAP
