

5 Moments When Integration Risk Spikes

Even the best integration platforms can experience risk when key business events occur.

Recognize the warning signs early so you can act before issues impact your operations, partners, and bottom line.

Risk increases when change happens.

Use these trigger points to identify gaps early and protect your integration environment before disruption occurs.

1

ERP MIGRATION OR SYSTEM CHANGE

New systems, data models, and processes put pressure on existing integrations and mappings.

RISK LEVEL: **HIGH**

- Data mismatches
- Mapping rework
- Delays and disruption

2

KEY INTEGRATION RESOURCE LEAVES

Loss of critical knowledge leads to gaps in support, tribal knowledge, and decision making.

RISK LEVEL: **HIGH**

- Knowledge silos
- Slower issue resolution
- Higher dependency risk

3

COMPLIANCE FINES OR PENALTIES RISE

Fines, chargebacks, or audit findings signal integration and data quality problems that are getting worse.

RISK LEVEL: **HIGH**

- Financial penalties
- Partner dissatisfaction
- Reputational risk

4

PLANNED OR EMERGENCY UPGRADE

Upgrades can break customizations, workflows, and mappings if not properly planned and tested.

RISK LEVEL: **MEDIUM**

- Failed upgrades
- Extended downtime
- Unplanned costs

5

TRADING PARTNER OR PROCESS CHANGE

New requirements, formats, or routing changes can cause failures and disrupt business flows.

RISK LEVEL: **MEDIUM**

- Failed transactions
- Onboarding delays
- Operational strain

Not sure where you stand?

Use our Integration Platform Success Scorecard to see where hidden risk may be building.
